Free Software

Definition (Free Software — *a* definition)

Free/Libre/Open Source Software (FLOSS) is computer software that gives users the freedom to **run** the software for any purpose as well as to **study**, **modify**, and **distribute** the original software and the adapted versions.

Free Software

Definition (Free Software — *a* definition)

Free/Libre/Open Source Software (FLOSS) is computer software that gives users the freedom to **run** the software for any purpose as well as to **study**, **modify**, and **distribute** the original software and the adapted versions.

How is that different from “usual” (proprietary) software?

Free Software

Definition (Free Software — *a* definition)

Free/Libre/Open Source Software (FLOSS) is computer software that gives users the freedom to **run** the software for any purpose as well as to **study**, **modify**, and **distribute** the original software and the adapted versions.

How is that different from “usual” (proprietary) software?

Let's look at a sample EULA:

https://www.microsoft.com/en-us/Useterms/OEM/Windows/10/UseTerms_OEM_Windows_10_English.htm (July 2017)

Why bother? — as citizens

Lester picked up a screwdriver. “You see this? It’s a tool. You can pick it up and you can unscrew stuff or screw stuff in. You can use the handle for a hammer. You can use the blade to open paint cans. You can throw it away, loan it out, or paint it purple and frame it.” He thumped the printer. “This [Disney in a Box] thing is a tool, too, but it’s not your tool. It belongs to someone else — Disney. It isn’t interested in listening to you or obeying you. It doesn’t want to give you more control over your life.” [. . .]

*“If you don’t control your life, you’re miserable. Think of the people who don’t get to run their own lives: prisoners, reform-school kids, mental patients. There’s something inherently awful about living like that. **Autonomy makes us happy.**”*

— Cory Doctorow, *Makers*

Why bother? — as computer scientists

Free Software has *radically* changed the way software is:

- developed
- tested
- proven
- conceived
- marketed
- sold
- maintained
- taught
- deployed
- ...

Why bother? — as IT professionals

- Free Software is everywhere
- participation in Free Software: a big plus on CVs
- in France: $\approx 10\%$ of IT GDP in 2014 (≈ 4 BEUR), constantly growing in spite of the crisis (cf. “Le marché du logiciel libre pèse 4,1 milliards en France”, Les Echos, 18/11/2015)

- “2017-2022: évolution du marché du Logiciel Libre en France”, CNLL/PAC 2017: slides,¹ video²

This course — topics

An introduction to Free Software topics, along the following axes

- history
- philosophy
- legal
- management / organization
- business / economics
- technical

Feedback from others, with external speakers

- companies
- professionals
- organizations / non-profits

This course — organization

Teaching (CM):

- $\frac{2}{3}$ lectures
- $\frac{1}{3}$ external speakers (usual time)

Practice (TD/TP):

- 11 sessions, alternating TD and TP as needed

This course — evaluation

1 exam

2 TD

- ▶ exercises
- ▶ short essays on selected topics, including external speaker interventions

3 project (mandatory, not CC)

- ▶ **relevant code contribution** to an existing, **major Free Software project**. Examples and guidance will be provided during TP
- ▶ exclusion criteria:

~~“pour le cours de Logiciel Libre de M. Zacchioli je dois contribuer un patch à votre projet, pourriez vous m'aider s'ils vous plaît?”~~

⇒ do the above, and your project note will be 0

Final note

- 1e session: 50% exam + 50% project
- 2e session: 50% exam + 50% project

This course — teaching material

<https://epsilon.cc/zack/teaching/1718/loglib/>

Addendum:

- as separate slide decks
- orally → **take notes** (also during external speaker interventions)
